

# EZContentManager

## for Multi-Company

Enterprise Content Management Supporting Separate Companies, Divisions and Multiple ERP Systems on One Single Platform

**Affordable Enterprise Content Management solutions designed to meet the needs of mid-market organizations!**

Headquarters now has control and visibility of the business processes, documents, and information required to run businesses in real-time from their common system management.

ACOM's EZContentManager (EZCM) now allows an organization's divisions, separate companies or subsidiaries to be easily configured as their own unique domains... with separate vendors, customers, GL accounting, and multiple automated processing rules. No more need for multiple installations and costly customization.

Users may then access multiple company domains regardless of their ERP system, with individual security settings for each domain.

**A powerful platform for mid-market companies using Sage® ERP or Microsoft Dynamics® GP to take real control of their information assets, enterprise-wide... from financial management through any department without compromise to the individual business environments they serve.**

**One central system without compromise to individual company identities, business rules and financial models.**

- One EZCM Installation Links Individual Company Domains.  
*Each Domain/Company has its own unique:*
  - » Vendors
  - » Customers
  - » GL Chart of Accounts
  - » Workflows / business rules
  - » Document Repository
  - » User Security
- Common System Management for your Entire Enterprise
- Unique Company Configurations & Multiple Workflows
- Single users access multiple company domains
- Individual security settings for each domain
- One EZCM Platform - Supports Multiple ERP'S

**American Top Tools**
