

Create Forms from IBM i Spoolfiles

NEW Features!

SQL

Use SQL statements within the forms designer to access and utilize data from your IBM i files. IBM i file data can be used on the label as text, bar codes, or images and can be used for output properties such as an email address to send the form.

HYPERLINKS

Hyperlinks can be specified on objects such as text, bar codes, images etc. When your form is output as a pdf document, a click on the object takes the viewer to the url.

TEMPLATES

Reusable templates can be created for entire forms or parts of a form and reused on any form making the process even faster!

TLA *Acme International, Inc.* **INVOICE**
